

REMARKS

As amended, claim 25 covers the situation where two players are playing the same game on the same center at the same time. They each provide commands to the game from wireless controllers. The way that the wireless commands from one controller can be distinguished from the wireless commands of the other controller is by appending a tag to the wireless commands from each controller that serves to distinguish commands from one controller from those of the other.

In the cited reference, there are no wireless commands. Instead, one user uses one half of the keyboard and the other user uses the other half of the keyboard. Therefore, there is no need for any identifiers to identify which wireless command is received from which player.

Therefore, reconsideration is respectfully requested.

Respectfully submitted,

Date: May 15, 2009
